

EiSWORLD and Neo4j Announce Partnership

EiSWORLD, a Neo4j Solution Partner, to Deliver Advanced Graph Analytics Solutions and Services

Turin, February 19, 2019: Today EiSWORLD announced its partnership with [Neo4j](#), the leader in graph databases and first choice for users and well-known brands including Antares Vision, [Cerved](#), [UBS](#), [Daimler](#), Lufthansa and Merck.

EiSWORLD chose Neo4j for the development of its Advanced Analytics applications and the implementation of strategic, high-value solutions, having experienced firsthand the real benefits derived through native graph technology.

Erik Nolten, Alliance & Channel Director at Neo4j welcomed EiSWORLD to the Neo4j community.

“EiSWORLD really understands the future of databases, data modeling and data science, and how graphs drive innovation for business,” said Nolten. “As a valued partner who demonstrates both expertise and integrity in client engagements, they’re an obvious choice to deliver high-impact graph analytics solutions that unlock the value of connected data for businesses.”

By entering the partnership program with its certified resources, EiSWORLD guarantees the improvement of its services to customers in terms of consulting and support, as well as the quality of solutions proposed.

EiSWORLD: We are a company founded in 2011. We operate in the ICT field, presenting an offer focused specifically on technological innovation to support business. We identify the needs of each Customer, and together we create services and solutions tailored to meet expectations and improve business performance.

Flexibility, speed, scalability and transparency are characteristics that allow us to set up a correct and profitable relationship with the Customer.

About Neo4j

About Neo4j

Neo4j is the leading graph database platform that drives innovation and competitive advantage at Airbus, Comcast, eBay, NASA, UBS, Walmart and more. Thousands of community deployments and more than 300 customers harness connected data with Neo4j to reveal how people, processes, locations and systems are interrelated. Using this relationships-first approach, applications built using Neo4j tackle connected data challenges including artificial intelligence, fraud detection, real-time recommendations and master data.
